1. Project Title and Authors

- a. Team 33
- b. The Wanginators
- c. Names and emails:
 - i. Anthony Tran: atran881@usc.edu
 - ii. Arsalan Ghogari: ghogari@usc.edu
 - iii. Himanshu Jain: jainhima@usc.edu
 - iv. Miheer Tongaonkar: mtongaon@usc.edu
 - v. Rishi Jain: rishij@usc.edu

2. Preface

- a. This document focuses on any changes made between the implementation/actual coding of AnchorNotes and the last documents which outlined architectural and detailed design. At the bottom of the document, there is a clear outline of which members worked on what feature to clear up any potential lack of clarity in the video.

3. Introduction

a. Description

- i. From students to professionals, to anywhere in between, collecting information down is an essential part of life. AnchorNotes allows notetaking to be performed using text, photos, and videos. AnchorNotes serves as a hub for all forms of notetaking for daily life.

b. Features:

- i. Note Storage:
 - 1. Users can create and store as many notes as they want up to their local or cloud storage limit.
- ii. Note Creation:
 - 1. New notes are created by pressing the “+” button on the home screen. Users can add voice memos, images, and text to their notes and format text with different font sizes and styles.
- iii. Note Search:
 - 1. Users can quickly locate specific notes by searching through keywords found in titles or note bodies. Searching is also refined using filters like tags, creation/edit dates, or attached media (photos, videos, voice memos, and/or location data). This combination of keyword search and smart filtering ensures that important information remains organized, discoverable, and accessible whenever needed.

iv. Note Organization:

1. Users can pin, tag, or attach locations to notes. Pinning notes places a note at the top of the home screen regardless of the time it was last modified. Tagging notes allows for easier search, serving as a filter for notes. Attaching a location to notes provides additional context for notes and also enables the geofencing-based reminder feature.

v. Built-In Reminders:

1. Users can choose to receive a notification for specific notes based on entering a certain location (geofencing) or at a certain time.

vi. Note Templates:

1. Users can create, edit, and manage note templates (with page color, pre-filled text, sections, and formatting), which are stored in a list alongside a default example template.
2. Templates can be associated with tags or geofences, and when creating a new note, users can select from available templates, with location-relevant ones prioritized at the top of the list.

4. Architectural Design Change

- a. Nothing noteworthy, beside the fact that some of the database inquiries might have been adjusted to accommodate the Note Map feature which we were unsure about implementing at the time.

5. Detailed Design Change

- a. A Google Cloud API Key was used to access the Places API (for finding locations) and Maps API (for the Note Map)

6. Requirements Change

- a. We're not sure if this was clearly outlined, but for geofenced reminders we thought it would be better if a geofenced reminder stayed in "Relevant Notes" so long as the user remained in the geofence, not for the duration of 1 hour. This more closely aligns with the goals of geofenced and time-based reminders. Time-based reminders do stay in "Relevant Notes" for 1 hour.
 - i. I think this was a discrepancy between the Piazza posts and the requirement document

7. Who worked on what:

a. Arsalan:

i. Note Creation:

1. Note formatting (text, bold, checklist)
2. Image insertion
3. Note search and filtering

- b. Anthony:
 - i. Anything location related:
 - 1. The Note Maps
 - 2. Attaching geofenced reminders
 - 3. Attaching location to note (worked on by Rishi and I)
 - ii. Reminders:
 - 1. Both location-based (geofenced) and time-based
 - 2. Push notifications for reminders
 - 3. Creation of “Relevant Notes” section
 - iii. UI Only
 - 1. Adding last modified time on the right of each note
- c. Himanshu:
 - i. Helped with filtering (Has Location, Has Audio, Has Image)
 - ii. Templates:
 - 1. List of templates and the ability to make new ones
 - 2. Applying templates to a note
 - iii. Attachments
 - 1. Attaching audio files
 - 2. Attaching video files
- d. Miheer:
 - i. Note Storage
 - 1. Ensuring that when the application is closed and reopened, the notes remain within the application
 - ii. Note Deletion
 - 1. Notes are able to be deleted by pressing and holding a note
- e. Rishi:
 - i. Note Organization
 - 1. Attaching tags to notes
 - 2. Pinning notes
 - 3. Rishi and Anthony worked on attaching location to notes
